

Azure Compliance Report

Document:	test_document_azure_config.txt
Analyzed By:	khizarahmedd3@gmail.com
Analysis Date:	2025-11-08
Overall Score:	60/100
Status:	Partial

Executive Summary

****Executive Summary:**** The Azure configuration analysis reveals a partial compliance status with an overall score of 60/100. Critical gaps include the lack of enforced multi-factor authentication for all users, the absence of conditional access policies, and inadequate password policy strength. Key compliant areas include enabled storage encryption at rest and the configuration of Azure Security Center. Immediate action is required to implement MFA for all users, establish robust conditional access policies, and strengthen password policies to improve the organization's security posture.

Detailed Findings

Category	Status	Score	Recommendation
General	Partial	60.6%	Implement Conditional Access policies to enforce MFA for all users based on risk, location, or device compliance, instead of only for administrative accounts. Prioritize enabling MFA for medium and high-risk sign-ins.
