Step 1: Navigate to Azure Portal to address: Lack of specific details on hardened workstation c
Review the gap and identify the appropriate Azure service
What to look for: Azure Portal dashboard

Verification Steps:

- Verify the setting has been applied

Azure Services Required: Azure AD, Azure Policy

Expected Outcome: Resolve gap: Lack of specific details on hardened workstation configurations for administrators accessing Azure resources.

Framework Reference: Azure Best Practices

Item #2: Address: No mention of X.509 management certificates for infrastructure and platform services management.

Priority:

HIGH

Effort:

Moderate

Description:

No mention of X.509 management certificates for infrastructure and platform services management.

Gap Addressed: No mention of X.509 management certificates for infrastructure and platform services management.

Azure Portal Navigation: Azure Portal > Azure Active Directory > [Configure based on gap]

Settings to Configure:

Setting Name:	Configuration required
Current Value:	To be determined
Required Value:	Compliant configuration
Location:	Azure Portal

Step-by-Step Implementation Guide:

Step 1: Navigate to Azure Portal to address: No mention of X.509 management certificates for in

Review the gap and identify the appropriate Azure service

What to look for: Azure Portal dashboard

Verification Steps:

- Verify the setting has been applied

Azure Services Required: Azure AD, Azure Policy

Expected Outcome: Resolve gap: No mention of X.509 management certificates for infrastructure and platform services management.

Framework Reference: Azure Best Practices

Item #3: Address: Limited discussion on the variable responsibility for security management based on the cloud service

Priority:

HIGH

Effort:

Moderate

Description:

Limited discussion on the variable responsibility for security management based on the cloud service model (IaaS, PaaS, SaaS).

Gap Addressed: Limited discussion on the variable responsibility for security management based on the cloud service model (IaaS, PaaS, SaaS).

Azure Portal Navigation: Azure Portal > Azure Active Directory > [Configure based on gap]

Settings to Configure:

Setting Name:	Configuration required
Current Value:	To be determined
Required Value:	Compliant configuration
Location:	Azure Portal

Step-by-Step Implementation Guide:

Step 1: Navigate to Azure Portal to address: Limited discussion on the variable responsibility

Review the gap and identify the appropriate Azure service

What to look for: Azure Portal dashboard

Verification Steps:

- Verify the setting has been applied

Azure Services Required: Azure AD, Azure Policy

Expected Outcome: Resolve gap: Limited discussion on the variable responsibility for security management based on the cloud service model (IaaS, PaaS, SaaS).
